

Read the instructions for use carefully
and keep them safe.

Features

- The product is powered by an 18650 lithium battery with a capacity of 1200mAh;
- The grid voltage is about 3000V when working;
- After the electric mosquito swatter is stopped, it has the function of automatically eliminating the residual electricity of the high-voltage net surface;
- The product has overcharge, overdischarge, overcurrent, and load short circuit protection, etc., to accurately detect the charging voltage to ensure the safety of charging.

WARNING

Keep away from children. Do not touch the metal mesh while charging. It is strictly prohibited to use in the environment of combustible gas, inflammable and explosive articles and hazardous chemicals.

Tips:

For the first use, please push the power switch to the "OFF" position and continue charging for 4-6 hours.

USB RECHARGEABLE
ELECTRIC BUG ZAPPER

Item NO. 6405E-2PK

The Parts Subsidiary: Electric Bug Zapper x2 /
USB Cable x2 / User Manual.

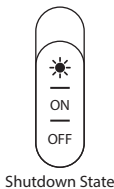

Tips: Due to the built-in low-voltage protection function of the product, when the 25% power indicator flashes or the power indicator does not light up on the product during use, it means that the battery has basically run out. Please stop using and charge it in time. And you need to push the power switch on the product to the "OFF" position to charge.

Product Features

- Using 18650 lithium battery, energy-saving, safe, environmental, long time using.
- The electronic circuit saves electricity efficiently. When it is in standby, the current is almost zero. When used, the mosquito net surface voltage is up to 3000V. The powerful voltage quickly kills mosquitoes, flies, and small insects, but for the user, it is also extremely safe to be careful to accidentally touch the mosquito net.
- Brand-new design 0.2W LED, no damage to eyes, makes it convenient for us to using it on dark.

Instruction

- Move the switch to OFF to turn off the power, move to ON position also press another button, the red working indicate light on, By wielding a mosquito swatter, you can kill mosquitoes, flies and small insects. Move the switch to a position, will turn on the LED light, and the mosquito can still be killed when the light on.
- When the lighting is dim or the mosquito-killing power grid is weak, please charge it in time. When the main switch is in the OFF position, Find the charging port 3, correctly inserted into the USB charging cable head, and insert the output DC5V charging port at the other end. At this time, the charging indicator is red, and the charging indicator turns green when the battery is full.

Shutdown State

Mosquito Killing Mode

LED Light + Mosquito Killing Mode

Precautions

- When the electric bug zapper is working, the metal mesh surface has high voltage! Keep away from children, beware of electric shock to children, do not touch the metal mesh surface with your hands or hand-held metal objects, high voltage danger, please pay attention to safety!
- Do not use this product in places where flammable gas or explosive dust may exist, and do not often use metal and other conductive objects to spark on the metal net;
- After use, please push the power switch to the OFF position;
- In order to guarantee the service life of the battery, if there is no obvious effect of hitting the killing bug during use, or the bottom battery power indicator flashes, it means that the battery power has basically been used up. please stop using and recharge products in time. When the voltage of the lithium battery is lower than 2.8V the low-voltage protection function of the product will cause the product to enter the protection state and appear to be unable to work, and it must be charged before use;
- If it is not used for a long time, the product should be replenished once every three months for about 4 hours. The product should be stored in a ventilated, dry place with a relative humidity of less than 80%. There should be no corrosive chemicals around;
- Do not wipe with wet towels or rinse the bug corpses on the net surface with water, you can use a soft brush with long hair or tap a few times to fall off (bug carcass may cause a short circuit on the meta mesh surface, damage the electric mosquito swatter, please clear it in time);
- Please do not slap other hard objects or pinch the mesh surface of the product to avoid damaging the metal mesh surface;
- Please operate in strict accordance with the requirements and precautions of the instructions, and do not disassemble at will. The company shall not be liable for any adverse consequences caused by illegal operation.

Parameter

Rated charging voltage	5V	Output voltage	≥3000V
Rated charging current	0.4A	Rated capacity	1200mAh
Product Size	8.3 x 18.11 x 1.5 inch	Charging time	≈5H
